

## JOB ADVERTISEMENT

**POSITION: Working Student for Cloud Technologies and Edge**

**VACANCY: ASAP**

**DATE: 2024.12.18**

### About Us

NovelSense UG was founded in 2016 by three KIT graduates. Our goal is the development of cheap but efficient sensors through the employment of machine learning. Our core product is the Abakus. Abakus is an embedded, camera-based traffic monitoring system (abakus.ai). NovelSense is also working in a number of research projects as well as supporting our customers in the areas of technical project management, Kubernetes, Azure, DevOps, edge-device maintenance and monitoring, data science/analytics and embedded development. Since its inception, NovelSense is a fully remote Startup.

### Your Tasks

We are looking for motivated employees to strengthen our team, particularly in the areas of Kubernetes, Azure Cloud Ecosystem, DevOps, data analysis, project management, as well as technical reviews.

### Your Profile

- You are a currently enrolled student
- You are studying computer science, electrical engineering, information management or a related field or in a different field but knowledgeable in the technologies listed below
- You are familiar with one or more of the following technologies and have perhaps used in your own projects:
  - Gitlab, git
  - Docker, docker compose
  - Kubernetes
  - Python
  - Azure DevOps CI/CD
  - Azure Portal / Azure Cloud
  - Project management
  - Bonus: UI/UX, Webdev
- Independent work and time planning
- Very good knowledge of English, both written and spoken
- Bonus: Ability to converse in German / good German skills
- Bonus: based in or close to Karlsruhe

## Our Offer

- Team: Be an important part of a team that transforms research and development into value creation and deals with an exciting variety of topics.
- Working hours and location: Work completely remotely and flexibly arrange your own working hours.
- Responsibility: Even as a working student, we give you responsibility for innovative and important tasks.
